

# Agenda for Fish Lab Exercise

## Day 1 (September 14th)

10:15-12:00 (Group 1)

13:15-15:00 (Group 2)

Species identification and dissection (~45min for each exercise). The class is split in half and you do one exercise first and then switch.

- Species identification – use identification guides to help you identify the species displayed.
- Dissection: Use the “Dissection Guide” when dissecting your fish and answer the questions within as you go.

## Day 2 (September 15th)

13:15-15:00

We meet in **Kurslab 5** to answer any questions about the dissection or about fish identification.

## Day 3 (September 18th)

10:15-12:00

You are expected to be ready to take the test at **10:15** and additional information about where to find the test will be announced on Friday.

**Test:** The test is **online** – you will be able to find it under the fish module in Studium with the name “Fish Quiz”.

It starts at 10:15 (meaning you should be logged on to zoom <https://uu-se.zoom.us/j/65286987516> at 10:00 and starting the test at 10:15. Make sure your connection works fine before that time) and you have **30 seconds** to answer each question. You can't revisit questions. You can use your notes from class but not the internet (the quiz software tells us if you navigate away from the quiz and to another page).

- Species identification questions
  - o Need to identify each fish (species name in Latin i.e., genus name and its specific epithet, and the common name in English or Swedish) - 1pt. per fish - any species on the ‘Fish pictures handout’ could appear on the test
  - o Two family photos (2pts) – which family is this fish in and what feature(s) indicate that?
- 5 anatomy/morphological or ecological questions (1pt each)
- Passing grade >60%
